MAR 20 2002
EI Associates

Dear Mr. Abdala:

During the past 1 ½ years, BioGenesis of New Jersey, L.L.C. has worked with you and your team to develop the design, and to support the construction and operations of our recently installed soil cleaning facility at the BASF site in Kearny, New Jersey. This facility was successfully started up during the summer of last year, and has exceeded our expectations with regard to operating efficiency.

I wish to thank you and the rest of the EIA people who worked on this project for the excellent, timely, efficient and professional support that you have provided to help make this project a success. The elements that your team provided for this project included a level of responsiveness and professionalism that I consider to be superior to that in my experience with others in the engineering design industry.

Due to the valued expertise and flexibility of your operations, we experienced the achievement of our design and construction management goals well within our expectations. It is with this in mind that we look forward to future association with EIA, and will recommend EIA to others seeking similar results.

Please feel free to share this letter with others within your company or outside your company.

Sincerely,

W. David Wilkin
Executive Vice President, C.F.O.
